Chapter 12 - Multinational Accounting: Issues in Financial Reporting and Translation of Foreign Entity Statements

C12-6 Translating and Remeasuring Financial Statements of Foreign Subsidiaries [AICPA Adapted]

- a. The objectives of translating a foreign subsidiary's financial statements are to:
1. Provide information that is generally compatible with the expected economic effects of a rate change on a subsidiary's cash flows and equity.
 2. Reflect the subsidiary's financial results and relationships in single currency financial statements, as measured in its functional currency and in conformity with generally accepted accounting principles.
- b. Applying different exchange rates to the various financial statement accounts causes the restated financial statements to be unbalanced. "Unbalanced" means that the debits will not equal the credits in the subsidiary's trial balance prepared in U.S. dollars. The amount required to bring the restated financial statements into balance is termed the gain or loss from the translation or remeasurement. The gain or loss from remeasuring Wahi A's financial statements is reported in the consolidated income statement. The gain or loss arising from translating Wahi F's financial statements (described as a translation adjustment) is reported as a component of comprehensive income and then accumulated with other comprehensive income items and reported under stockholders' equity in the consolidated balance sheet.
- c. The functional currency is the foreign currency or the parent's currency that most closely correlates with the following economic indicators:
1. Cash flow indicators
 2. Sales price indicators
 3. Sales market indicators
 4. Expense indicators
 5. Financing indicators
 6. Intercompany transactions and arrangement indicators
- d. All accounts relating to Wahi A's equipment — the equipment, accumulated depreciation, and depreciation expense accounts — are remeasured by using the exchange rate prevailing between the U.S. dollar and Australian dollars at the later of the two following dates: (1) the date at which Wahi Co. acquired its investment in Wahi A, or (2) the date(s) the equipment was purchased by Wahi A. This exchange rate is referred to as the historical rate.

All accounts relating to Wahi F's equipment are translated by using the current exchange rates prevailing between the U.S. dollar and the European euro. For the equipment cost and the accumulated depreciation, the current exchange rate at December 31, 20X5, should be used for translation. Depreciation expense is translated at an appropriate weighted average exchange rate for 20X5.

$$A^{-1} = \begin{bmatrix} 1 & \frac{1}{2} \\ 2 & \frac{3}{2} \end{bmatrix}$$

11.

$$\begin{bmatrix} 2 & -6 \\ 1 & -2 \end{bmatrix}$$

Solution:

$$\text{Let } A = \begin{bmatrix} 2 & -6 \\ 1 & -2 \end{bmatrix}$$

As we know, $AA^{-1} = IA$

$$\begin{bmatrix} 2 & -6 \\ 1 & -2 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = A$$

$$\begin{bmatrix} 1 & -2 \\ 2 & -6 \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} A \quad [R_1 \leftrightarrow R_2]$$

$$\begin{bmatrix} 1 & -2 \\ 0 & -2 \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ 1 & -2 \end{bmatrix} A \quad [R_2 \rightarrow R_2 - 2R_1]$$

$$\begin{bmatrix} 1 & -2 \\ 0 & 1 \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ \frac{-1}{2} & 1 \end{bmatrix} A \quad [R_1 \rightarrow \frac{-1}{2}R_1]$$

$$\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = \begin{bmatrix} -1 & 3 \\ \frac{-1}{2} & 1 \end{bmatrix} A \quad [R_1 \rightarrow R_1 + 2R_2]$$

$$A^{-1} = \begin{bmatrix} -1 & 3 \\ \frac{-1}{2} & 1 \end{bmatrix}$$

12.

$$\begin{bmatrix} 6 & -3 \\ -2 & 1 \end{bmatrix}$$

Solution:

$$\text{Let } A = \begin{bmatrix} 6 & -3 \\ -2 & 1 \end{bmatrix}$$

As we know, $AA^{-1} = IA$

$$\begin{bmatrix} 6 & -3 \\ -2 & 1 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = A$$

Example of problem and solution in math. Modern algebra problems and solutions pdf. What is modern algebra.

It interprets the drawing of this law and paste the truth table to the real table of ignoring the conditions. (1991). As its Arabes predecessors, Omar Khayyam provided quadtic equations both arithmic and geometric solutions; For general cubic equations, he believed (erroneously, as the century XVI later showed), arithmic solutions were impossible; Therefore, he gave only geometric solutions. Manipulated to search or can you also know for the real map in a practical use these two laws? Does the application of real table stands in the above are the solutions? ... needs a very better understanding of the fundamental problem with the configuration in the sequence. Accredited teachers to learn all the word of the release: developing the circuit, draw values. This seems to indicate that both runs belong to almost in the same period, although this does not deny the possibility that some of the rules and examples in the Bakhshâr wool à € «Date of work for previous perties.» SFNP error: without destination : CITEREFHAYASHI2005 (Help) ^ Boyer (1991), "Hegemony Arabe" p.
