Convert .tmp file to excel .xls online. Convert file xlsx to xls free online. Convert .xla file to xls online. Convert .jpg file to xls online. Convert xls file to xml online. Convert xls file to pdf online. Convert xls file to xlsx online. Convert xls to xlsx without opening file online.

Image: GettyImages/Edwin Tan I can't tell you how many times I've had to work to upload data to a new system (be it a CMS, CRM, HRM ... you name it), only to find out the platform wouldn't accept the file format I had available. I might have a spreadsheet or JSON file with tons of data, but the system would only accept a CSV file. CSV. You know what it is: Comma-Separated Value. It's a flat file of data, each entry separated by a comma. Now, some applications make it possible to export a file to CSV format. Even Google Docs allows for such an action with Sheets. But not every application can take care of that export. And you might have a file that was created by another application (such as an app or service that generates JSON files) and you need that file converted to CSV format. SEE: 40+ open source and Linux terms you need to know (TechRepublic Premium) What do you do? Since we have Linux available to us, you turn to a simple, open-source tool called csvkit. This handy app has saved me a few hours worth of work on a number of occasions. What csvkit can do is convert to and work with CSV. If you've ever done any development work or deployed enough networked platforms (such as CMS tools), you've most likely run into a situation where you needed to upload data in CSV format. And all you have is a spreadsheet file. If you're on a desktop, you could always open the file in your office suite of choice and do a Save As. But what if you're on a headless server and you need to work quickly? You don't want to have to SCP the file to your desktop, load the file, save it in the requisite format, and then SCP the file back to the server. You want to be efficient. Hence, csvkit. Let's get it installed and see how it works. What you'll need I'll be demonstrating csvkit on Ubuntu Server 21.10. In order to make this work, you'll need a Ubuntu-based distribution and a user with sudo privileges. Finally, you'll need a spreadsheet file to convert. How to install csvkit Csvkit is available in the standard repositories, so the installation is very simple. Log into your Ubuntu server (or desktop), open a terminal window, and issue the command: `sudo apt-get install csvkit -y` That's it for the installation. How to convert an XLS file to CSV Let's say you have the file clients.xlsx and you need it converted to clients.csv to be then uploaded as a client list in your new CRM tool. The spreadsheet is already laid out in the exact format needed for your CMS, so all you have to do is convert it. For such a conversion, you'd use the `in2csv` command (included with csvkit) like so: `in2csv clients.xlsx > clients.csv` If you have unnamed columns or rows in your source file, you might see some output from the command warning that alphanumeric values were used in place of the missing entries. The conversion should take just a few seconds (depending on how large the file is). Once it's complete, you should have a file named clients.csv in the same folder. You can check that file with: `less clients.csv` You should see a perfectly-formatted CSV file, ready to be uploaded (Figure A). Figure A Our CSV file, exported from xlsx, using in2csv. The same holds true for the conversion of a JSON file, which is handled like so: `in2csv clients.json > clients.csv` If you need to convert that file from CSV to JSON, you can do that with the `csvjson` command like so: `csvjson clients.csv > clients.json` Csvkit has a couple of other handy tricks up its sleeve. You can list out the column names in a file with: `csvcut -n clients.csv` Now that you know the column names from your newly converted CSV source, you could convert only certain columns from the clients.csv file to another CSV file. Say you have columns First Name and Last Name and you only want those columns converted to the new file. That would be done with: `csvcut -c 'First Name','Last Name' clients.csv > names.csv` And that's how we can manipulate XLS, JSON, and CSV files with csvkit. This tool might not be used very often, but when you need it, you'll be happy it's around. Converting files has never been easier. No longer is it necessary to download or purchase special software to complete file conversions, such as JPG to PDF. Instead choose from one of several online file conversion tools that allow you to convert your JPG to PDF format. The conversion process only takes a minute, and you'll be able to immediately download your PDF file, either on the website or through your email. Visit the Free JPG to PDF website (see Resources for link). Click on "Choose File." Select the JPG image you want to convert to PDF. Click "Convert." Wait a few moments for the conversion to complete. Choose "Download PDF" on the confirmation screen. The PDF begins downloading to your hard drive. Visit Neeva's website (see Resources for link). Choose "PDF" as your output format. Click on "Choose File" and select your JPG file. Choose "Upload and Convert." Click "Download" when the conversion finishes. Visit Zamzar's website (see Resources for link). Click "Choose File" and select your JPG file. Select "Documents-PDF" as your output file type. Type your email address. Click "Convert" to convert your JPG to PDF. Zamzar sends an email to your inbox containing the download link. Zamzar is a good free file converter that supports lots of file formats. It's really easy to use and lets you convert files online without having to download any software. It's not the first service or software I'd try, but it works for what it does. We found it to be slower than most other online file converters, but if you're disappointed with some other file converters or really need to complete your file conversion online, give Zamzar a try. Works on any operating system since it just requires a browser to run (i.e., Zamzar works with Windows, Linux, Mac) You can upload a file from your computer or enter a URL to an online file Converts between many document, image, video, archive, audio, and CAD formats. You can see a full list of file formats you can use with Zamzar from their Conversion Types page Zamzar converts TXT files to MP3 format, providing a high-quality, online text-to-speech service Entire file conversion with Zamzar is completed in four steps: no download required Zamzar can be used to convert files through email, too (up to 1 MB for free) Regular, non-email conversion is free for any file up to 50 MB, but you can upgrade to a payment plan if you want to use it with much larger files. Upgrading has other perks also, like online storage of your files, high-speed downloads, no ads, higher conversion priorities, and faster support time Zamzar is very easy to use. Just visit their website, upload your original files, choose the format you want to convert them to, and then hit Convert Now. Converted files can be downloaded immediately or you can choose the option to receive the links via email. That's it! Another, somewhat secret feature supported by Zamzar is their email attachment conversions. With the file attached (or multiples as long as each is under 1 MB), send the message to the email address that corresponds to the format you file to be converted to, such as jpg @zamzar.com to convert your PNG file to a JPG. If you're on a phone and would like a DOCX file to be in the PDF format, send it to pdf@zamzar.com. Zamzar supports a variety of file formats. Some notable problem formats that Zamzar supports include WPD (Wordperfect Document), RA (RealMedia Streaming Media), FLV, and DOCX. Zamzar makes working with these and many other formats as easy as a few mouse clicks. Zamzar is a decent choice if you need an image converter or document converter, but the 50 MB file size limit makes it nearly impossible to use as a video converter or sometimes even as an audio converter. As the files get larger and larger, it takes longer and longer to upload, convert, and then download again. Plus, most lengthy videos surpass 50 MB. This online file converter is only useful for very light conversions since it maxes out at two conversions per day. You can use the service every single day for free, but only two files can be converted within every 24-hour period, which is a huge restriction for anyone wanting to use this as a repeat service. It should also be noted that Zamzar has an optional, tiered premium service—Basic, Pro, and Business—with increasing maximum file sizes, online storage space, the speed of conversion, and so on. We only tested the free service, so some of our experiences with Zamzar may or may not have improved if we had used one of the premium tiers. Thanks for letting us know!
